

### **ABSTRACT OF THE DISCLOSURE**

A method for manufacturing a spark plug is disclosed. In first step S10, a chip 1 including a flange portion 1b and a protrusion 1a protruding from a first face 1c of the flange portion 1b is manufactured. In second step S20, a second face 1d of the flange portion 1b is tentatively joined, through resistance welding, to a joint face 32 (42) of the electrode base metal of at least either one of a center electrode 30 and a ground electrode 40, the joint face 32 (42) being located on the side toward a discharge gap. In third step S30, the flange portion 1b is laser-welded to the joint face 32 (42) such that a weld portion 3 extends to points on the second face 1d of the flange portion 1b, the points being located inward of corresponding intersections of the second face 1d of the flange portion 1b and imaginary extension lines of the side surface of the protrusion 1a.
